C) SECTION THREE: READING COMPREHENSION – 10 MARKS.

Read the passage below and answer the questions that follow it.

For any successful economy, particularly in today's quest for knowledge, economics, science, technology and engineering are the basic requisites. If nations do not implement science and technology, then the chances of getting themselves developed become minimal and thus could be even rated as undeveloped nations. Science and Technology I associated in all means with modernity and it is an essential tool for rapid development.

Modernization in every aspect of life is the greatest example of the implementation of science and technology in every nation. With the introduction of modern gadgets in every walk of life has become simple and this is possible only because of implementing science and technology together. Without having modern equipment in all sectors, be it in medicines, infrastructure, aviation, electricity, information technology or any other field, the advancement and benefits that we have today would not have been possible.

A nation that is not able to prosper on these grounds would never be able to sustain the lives there and may have to solely depend on other nations for the basic requirement. Such is the influence of science and technology for the development of a nation. Villages are developed into towns and towns to cities and cities are expanding to greater horizons. This expansion has occurred through the expansion of science and technology over the years and will be more in the coming years.

Today, countries are classified as developed and developing countries. The major categorization is based on economy and the application of science and technology. If carefully analysed, one gets to understand that countries which have a strong base in science and technology are the ones that developed faster. A few examples are of countries like Russia, Japan, Brazil, China, India and many more. It is estimated by the World Bank that seven of the ten largest economies of the world by 2020 would be in Asia – China, Japan, India, Thailand, Indonesia, South Korea, and Taiwan. A few decades ago, these countries were known to have

poor policies, low discipline and no advancement and then with the introduction of science and technology in an effective manner, they have made ripples across the globe.

The role that science and technology has played in improving the living conditions across the globe is vivid, but the benefit has been harvested to maximum by all countries. Science and technology has made life a lot easier and also a lot better with the advancement of medicines and analysis on diseases. Apart from the medical side, there has been remarkable development in education, communication, agriculture, industry and other. The global economic output has increased seventeen folds in the 20th century. Yet, in spite of the advancements in almost all sectors, the world is not free from hunger, disease, pollution, illiteracy and poverty. The gap between the rich and the poor has widened. By the 21st century, with right applications of research, development, and implications of science and technology a major difference could be brought about.

QUESTIONS :

- 1. Is there any link between science, technology and development? Justify your answer.**

2,0 marks

.....

.....

.....

.....
